Do you have plans to increase the square footage of your lawn? Some Ambrogio models are customizable!

The best choice for you: +Infinity System

This innovative navigation system allows multiple robots to simultaneously share the working space and manage the same area, for precise and complete mowing of the entire area.

Robots quipped with **+INFINITYSYSTEM** can adapt to work in lawns that have increased their surface over time.

Outdoor areas that become “lawn” can be managed in perfect combination with all other green spaces.

+INFINITYSYSTEM, via the Cloud and ZCS Connect technologies, creates a virtual map on the area to be mowed that is constantly shared. The shared map allows robots to know the micro areas already cut by optimizing the working time.
